DETAILED ACTION

Information Disclosure Statement

The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Ichihara, U. S. Patent No. 5,227,968. Regarding claim 1, Ichihara describes a method for discriminating desired radiation events comprising the steps of obtaining a response function (col. 5, lines 64-68), obtaining a radiation distribution, and mathematically operating on said radiation distribution with said response function (see abstract).

Regarding claim 2, Ichihara teaches the use of the detector in a medical device (see abstract).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ichihara as applied to claim 1 above, and further in view of Lingren, U. S. Patent No. 5,847,396. Regarding claim 3, Ichihara does not teach the use of a CZT detector. However, Lingren teaches that CZT detectors are useful in imaging radiation detectors (col. 8, lines 1-6). Therefore it would have been obvious to one of ordinary skill in the art to use CZT in the invention of Ichihara to detect radiation.

Regarding claim 4, Ichihara teaches the obtaining of a response function for each pixel of the detector (col. 5, lines 64-68).

Allowable Subject Matter

Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The method of claim 5 comprising the calculation of a dot product of a response function and a weighting vector is considered a nonobvious modification of prior art methods.
